About Us

We are leveraging our deep expertise in solar and energy storage to put more clean, renewable megawatts on the grid. With a pipeline of more than 100 projects across the U.S., we intend to meet the demand from clean energy customers large and small. With decades of combined experience in early-stage development, construction, and operations, CleanCapital is a trusted partner to project developers, project sellers, energy customers, investors, and other stakeholders in the energy transition.

We focus on distributed solutions including middle-market solar and storage assets, mid-scale utility solar, and diverse offerings that serve a variety of markets across the United States and its territories. Founded in 2015, we are among the top commercial solar asset owners in the U.S. with more than \$1 billion invested in the energy transition. CleanCapital invests across the full lifecycle of solar and energy storage projects, including early-stage development, construction, and operations.

Pipeline

More than 100 projects totaling 2 GW of solar & 8 GWh storage

Built

CleanCapital / BQ Energy team has developed or constructed more than 40 projects totaling 200 MW since 2006

Operating

Managing more 220 projects totaling 300 MWs

Invested

More than \$1 billion invested in assets and companies furthering the energy transition

Emissions

>200 GWh emissions-free energy produced

Capabilities

Dedicated in-house development and construction teams with >200 MWs constructed to date.

Proven expertise in middle market solar, utility-scale solar, brownfield & landfill development, and energy storage.

Ability to deliver the full capital stack to connect projects with timely financing.

Experience managing >300 MW of solar projects serving hundreds of energy customers across 23 states & U.S. territories.

Recognized leadership in brownfield & landfill development, delivering additional environmental and social benefits to communities and customers.

Development & Construction

From siting and permitting to construction and operations, our team has over 20 years of experience bringing clean energy projects from concept to completion. Our in-house development team—born out of CleanCapital's acquisition of BQ Energy in 2022—has developed and constructed more than 40 projects totaling over 200 megawatts. Most of those projects are sited on brownfields, landfills, and other environmentally compromised land, a specialization in which BQ Energy has decades of experience.

In addition to self-developed projects, we partner with developers to grow and diversify our pipeline with a variety of geographies, asset types, and customers. We are continually investing in developer partners who will build the future of grid-critical clean energy projects.

Developer Partnerships

Developers of clean energy projects know that time is money and trustworthy partners are worth their weight in gold. We help solar developers put more clean energy on the grid by investing in developer partners and their early-stage pipelines and by buying shovel-ready and operating assets. Our in-house expertise, professional processes, and ready access to capital enable developers to achieve short-term financial goals and accelerate longer-term projects while maintaining the integrity of their commitments to project stakeholders.

Acquisitions

CleanCapital is among the nation's leading owners of middle market solar and energy storage projects. Our record of successful project acquisitions is proof of our sound strategy, years of climate finance expertise, and highly professionalized approach. Our deep bench strength and exceptional reputation have made us a trusted partner to counterparties and has earned the financial backing of some of the world's preeminent institutional investors.

Our goal is to build, own, and operate a portfolio of clean energy projects that serve renewable energy stakeholders large and small, enabling everyone to play a role in the clean energy revolution.

Power Sales

CleanCapital serves the energy needs of customers ranging from small schools and municipalities to Fortune 100 companies. Our track record of consistent production, limited downtime, and proactive communication with customers has earned us a reputation as an effective and experienced partner to our energy offtakers.

Our projects supply energy to corporations, municipalities, universities, schools, and hospitals, utilities, and community solar subscribers. We currently serve more than 200 energy customers and are seeking power sales arrangements for numerous projects in our development pipeline.

Asset Management

As a trusted long-term asset owner and operator, our team is experienced in handling day-to-day project maintenance as well as extreme weather events in a variety of geographies to make sure projects remain operational or are repaired as quickly as possible. Our dedicated asset management team navigates these nuances, secures critical uptime, and focuses on keeping every site operational through things seen and unforeseen.

Meet with us! 

We are actively acquiring DG solar and storage projects and seeking new partners. If you are a project owner considering a sale—or a developer with a robust project pipeline—we want to connect with you.
